Mahmoud Khairy

Data Analyst & Data Specialist

Email: mahkar908@gmail.com **LinkedIn:** mahmoud-khairy-44189b354 **GitHub:** github.com/KHairy2233

Location: Egypt (Open to Remote & Relocation)

PROFESSIONAL SUMMARY

Results-oriented Data Analyst & Data Specialist with hands-on expertise in business intelligence, data modeling, exploratory analysis, and ETL pipeline automation. Proven track record in architecting Medallion-layered relational data warehouses in SQL Server, authoring complex DAX measures in Power BI, conducting Market Basket and What-If financial forecasting, and engineering predictive machine learning models in Python. Dedicated to empowering executive stakeholders with actionable clarity.

PROFESSIONAL EXPERIENCE

Data Specialist — Menwer

Full-Time

- Oversee organizational data integrity, reporting protocols, and standardized collection frameworks across active operational departments.
- Design and execute comprehensive data audits to identify and resolve systemic tracking anomalies, eliminating multi-system reporting discrepancies.
- Partner with department leadership to translate complex operational workflows into dynamic KPIs and executive summary reports.

Data Analyst Intern — Codveda Technologies

Internship

- Executed in-depth Exploratory Data Analysis (EDA) on commercial datasets to identify sales trends, behavioral patterns, and performance anomalies.
- Constructed intuitive Power BI and Excel dashboards to visualize key performance indicators for team reviews.
- Developed reusable Python and SQL scripts for data cleaning, aggregation, and automated preprocessing pipelines.

SELECTED PROJECTS (FROM GITHUB)

Cottonil Retail Analytics Dashboard — Power BI, Python, Excel, Power Query, DAX

- Built multi-tab retail intelligence system featuring Market Basket Analysis (Lift, Support, Confidence) and dynamic What-If price & discount simulation parameters.

Enterprise SQL Data Warehouse (Medallion Architecture) — SQL Server, T-SQL, Stored Procedures, ETL

- Designed 3-layer architecture (Bronze, Silver, Gold) with automated T-SQL stored procedures, deduplication, surrogate key generation, and star schema dimensional marts.

Baladna Supply Chain Analytics — Power BI, Power Query, DAX, Star Schema

- Engineered production vs distribution tracking dashboard monitoring factory quotas, logistics fulfillment, and regional target achievement.

Customer Flight & Loyalty Activity Analytics — Python (Pandas, NumPy), Power BI

- Conducted extensive EDA on flight records and loyalty tiers, designing 6 visual dashboards tracking seasonality, points redemption, and churn risks.

Customer Churn Predictive Analysis — Python, Scikit-learn, Pandas, Seaborn

- Trained machine learning classification models identifying key cancellation drivers across contract types and payment methods.

TECHNICAL SKILLS & COMPETENCIES

BI & Analytics:	Power BI (DAX, Modeling), Tableau, Excel (Power Query, Pivots, What-If), KPI Dashboards
Databases & SQL:	Microsoft SQL Server, T-SQL, Stored Procedures, Star Schema, Medallion Architecture, 3NF Normalization
Programming & ML:	Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), Linear Regression, Classification
Automation & Web:	Web Scraping (Requests, BeautifulSoup, Selenium), Google Apps Script, Google Sheets, HTML5, CSS3, JS

EDUCATION & CREDENTIALS

Higher Education in Data & Information Systems — University Studies

Focused on database architecture, quantitative methods, systems analysis, and statistical decision sciences.
